

LF Ruffer Total Return Fund

Positive absolute returns with low volatility

C class February 2019 Issue 194

During February, the fund price fell by 1.8%. This compared with a rise of 2.3% in the FTSE All-Share Index and a decline of 0.9% in the FTSE Govt All Stocks Index (all figures total returns in sterling).

We are currently positioned to try to capture some of the bounce in markets, but we have not compromised on protection in order to achieve this. In January this was reasonably effective (+3%) but in February protective assets have been a drag on performance. This month we thought it would be helpful to share our answers to questions that have been raised recently by investors.

Given your cautious outlook, why do you hold high-beta cyclical businesses? We currently have a low weighting to equities (39%). Their role is to make us money if we are wrong (or early) in having a cautious outlook and they need to punch hard to offset the cost of protective assets. A sustained rally in markets (not our core thesis) will be driven by supportive monetary policy or a stronger-for-longer economy – an environment where cyclical businesses will benefit most. This scenario is also likely to see an initial period of rising real interest rates, which would hurt index-linked bonds.

You have been concerned about credit markets – how will you benefit from that insight and why does it matter if I don't hold corporate bonds? We have exposure to credit default swaps, which will rise in value as credit spreads widen (ie investors price greater risk into corporate bonds). The root of our concern lies in the rising tide of low interest rates and abundant liquidity over the last decade. This has led to a bonanza in corporate debt issuance as savers reached for yield. This tide is now receding. Many corporate bonds are illiquid and are held in vehicles promising daily or weekly liquidity; not a problem when flows are positive but deeply problematic when they reverse. A blow-up in corporate credit has wider implications – rising corporate borrowing costs will affect equity prices and the illiquidity of corporate bonds means that investors will turn to more liquid markets (equities) to de-risk if they cannot sell corporate bonds.

Why have you reduced exposure to Japanese equities? We reduced overall equity exposure last year and felt that this should include Japan. The sales were focused on financial stocks as the biting point for global rates appears now to be lower than previously anticipated. However, the domestic story around Abenomics remains compelling. Corporate governance reforms and ROE targets are working. The most tangible impact has been rising dividends and share buybacks seen across our holdings. We expect this to continue as Japanese companies still hold too much cash on their balance sheets.

How has gold exposure changed in the last year? We increased exposure to bullion in July and then in September partially switched into gold miners. Both of these changes had a positive impact as the initial rise in the gold price was followed by a period of M&A in the sector.

The fund's prospectus and key investor information documents are provided in English and available on request or from www.ruffer.co.uk. Please note that LF Ruffer Investment Funds is a UK UCITS. The LF Ruffer Total Return Fund is not registered for distribution in any country other than the UK. In line with the Prospectus, it is possible that at any one time the LF Ruffer Total Return Fund may invest more than 35% of its assets in transferable securities issued or guaranteed by an EEA state, one or more local authorities, a third country or a public international body to which one or more EEA States belong. The only aforementioned securities where Ruffer would currently consider holding more than 35% would be UK or US government issued transferable securities.

Investment objective

The fund aims to achieve low volatility, positive returns from an actively managed portfolio of different asset classes, including equities, bonds and currencies. Capital invested is at risk and there is no guarantee that a positive return will be delivered over any one or a number of twelve-month periods. The fund may also invest in collective investment schemes, cash, money market instruments, other transferable securities and derivatives and forward transactions. Pervading this objective is a fundamental philosophy of capital preservation.

Performance since fund launch on 29 September 2000
